

Primary Investigation Report

(Disaster Management Cell and Anti-Disaster Management Committee, VVIT)

Today on **24.07.2023** morning, a pressure cooker exploded, with grace of divine no major loss and worker is safe.

Despite it, we cannot overlook the disastrous situation and we need to reduce the vulnerability of any accident.

These following steps are recommended:-

1. Change outdated utensils and continuous monitoring is needed.
2. Cook suggested, to avoid use of pressure cooker, He said, cook will take more time but it would be safe.
3. Hand gloves during cooking on fire should be given.
4. Need to empower Anti Disaster Committee.

I hope, we will make together our campus safe and disaster free.

Sincerely yours

Vivek Rai

Disaster management Cell
